## OH|ID Integration Increases Security and Enhances User Experience

The Ohio Business Gateway Modernization Project will transform the current Gateway into a more secure, user-friendly and reliable portal. As part of the modernization, the Gateway is integrating with OH|ID — the state's enterprise identity solution that provides a more secure and private digital interaction between the state and its constituents.

When Ohio Deferred Compensation is available on the new Gateway, users will be able to access multiple state services using a single OH|ID username and password. Logging in with only one credential delivers a more seamless sign-on experience and simplifies account maintenance, which saves time and increases efficiency.

When the modernized Gateway goes live, after completing a one-time OH|ID account set-up process, employers who utilize the Gateway to post deferral amount changes, make ACH payments to Ohio Deferred Compensation or update their employer contact information currently on file with Ohio Deferred Compensation will utilize their OH|ID username and password to access the modernized system. The new OH|ID username and password will replace the users' previous Gateway credentials.

The Gateway's integration with OH|ID will not only improve the security and privacy of user information, but users will receive a more personalized, enhanced experience.

For more information about the Gateway Modernization Project and to sign-up to receive regular email updates, visit [business.ohio.gov/gatewaymodernization](https://business.ohio.gov/gatewaymodernization).
